1.Project Description:

1.1. Introduction to the EDIS process:

- This document breaks down the e-DIS (Electronic Delivery Instruction Slip) functional requirements into discrete, implementable user stories for the Jainam client portal. It covers the four transaction types supported by the e-DIS module: Verify Stocks (On-Market), Transfer Stocks (Off-Market), Pledge, and Unpledge.
- Each user story includes: the story statement, acceptance criteria, business logic/rules, UI requirements, the end-to-end process flow, a client-side flow, and a broker/back-office-side flow, so that design, development and QA can verify the eDIS flow.

Background

• e-DIS is an integration between brokers and the CDSL Demat Gateway that lets clients authorise debit/transfer of securities from their demat account towards exchange pay-in obligations, without submitting a Power of Attorney (POA).

• This facility is required for NON-POA clients only.

• DDPI (Demat Debit and Pledge Instruction) is the document that replaces POA and authorises the broker/DP to debit or pledge securities as instructed by the client.

• The **Demat Debit and Pledge Instruction (DDPI)** is an authorisation framework that enables investors to grant their broker or Depository Participant (DP) limited rights to debit or pledge securities held in their Demat account for specific transaction-related purposes.

Introduced as a safer and more transparent alternative to the traditional Power of Attorney (POA), DDPI simplifies securities transactions while ensuring greater investor protection.

1.2. Glossary of terms:

Term	Definition
e-DIS	Electronic Delivery Instruction Slip — digital consent mechanism for debiting securities from a demat account.
POA	Power of Attorney — a legacy authorisation given by a client to a broker to debit securities.
DDPI	Demat Debit and Pledge Instruction — replaces POA; authorises broker/DP to debit or pledge securities.
CDSL	Central Depository Services Limited — depository that authenticates and processes the e-DIS request.
NSDL	National Securities Depository Limited — validates debit instruction details against CC obligation data.
T-PIN	Transaction PIN used by the client to authenticate on the CDSL site.
OTP	One-Time Password sent to the client's registered mobile/email for authentication.
BOID	Beneficiary Owner ID — the client's demat account identifier.
VAR Margin	Value at Risk margin applied to a stock; 100% VAR stocks are not eligible for pledging.

Haircut	Risk-adjusted reduction applied to a pledged stock's valuation.
IPV	In-Person Verification — mandatory verification step for off-market transfers.
PSN	Pledge Sequence Number — unique tracking number for a pledge transaction.
Bhav Copy	End-of-day price/data file used for liquid assets (gold, silver, bonds, G-Sec).
Approved / Unapproved Stock	Classification from the approved stock report (maintained in COMET); unapproved stocks are not eligible for pledging.

1.3. eDIs functionality roles:

Role	Description / Access
Client (Non-POA)	On-market and off-market
Client (POA)	Off-market, pledge and unpledge
Broker/ Branch/ UID	Pledge/ unpledge

1.4. Cutoff timing for eDIS functionality:

Process	Client Window	Cutoff Time	If Done After Window	Issue Resolution SLA
On-Market (Verify Stocks)	9:00 AM – 5:00 PM	No cutoff time	Request accepted next day	Must be resolved the same day before 5 PM, at any cost — Urgent priority

Off-Market (Transfer Stocks)	8:00 AM – 5:00 PM	5:30 PM	Accepted/verified on next trading & settlement day	Must be resolved same day — Urgent priority
Pledge	8:00 AM – 7:00 PM	No cutoff time	Request accepted next day at 12:00 PM	Must be resolved same day — Urgent priority

1.5. Journey initiation from JPLUS:

1. **Client Side:**

#	User Story	For which client	Trigger Point in Journey
1	Verify Stocks (On-Market)	POA No Only	JPLUS → Dashboard → My investment and holdings both
2	Transfer Stocks (Off-Market)	POA No and Yes both	JPLUS → Dashboard → My investment and holdings both
3	Pledge Stocks	Only POA Yes client	JPLUS → Dashboard → My investment and holdings both
4	Unpledge Stocks	Only POA Yes client	JPLUS → Dashboard → My investment and holdings both

2. **Broker Side:**

#	User Story	For which client	Trigger Point in Journey
1	Pledge Stocks	POA yes, client only	JPLUS → Dashboard
2	Unpledge Stocks	POA yes, client only	JPLUS → Dashboard

1.6. Placement for eDIS:

Launching Action	User	Navigation	Navigation Link	Figma
JPLUS Dashboard (My Investments)	JPLUS web - Client	No breadcrumb. Follows existing Normal Pledge navigation (for eg)	Direct link to Pledge Page	https://www.figma.com/design/wVXS4AgV42Y2deVtJJr15y/JPlus_v2_In-house?node-id=58372-252510&t=SY2lbw7LXtATk9mo-4
Holdings (My Dashboard)	JPLUS web - Client	Portfolio > Holdings > Stock Margin (eg)	Through Holdings navigation, lands on Pledge Page	https://www.figma.com/design/wVXS4AgV42Y2deVtJJr15y/JPlus_v2_In-house?node-id=58372-245713&t=SY2lbw7LXtATk9mo-4
JPLUS Dashboard	JPLUS web - Broker / Branch / UID	No breadcrumb. Follows existing Pledge/Unpledge journey.	Direct link to Pledge Page	https://www.figma.com/design/wVXS4AgV42Y2deVtJJr15y/JPlus_v2_In-house?node-id=58372-332945&t=SY2lbw7LXtATk9mo-4

Holdings (My Dashboard)	JPLUS web - Broker / Branch / UID	Portfolio > Holdings > Stock Margin (eg)	Through Holdings navigation, lands on Pledge Page	https://www.figma.com/design/wVXS4AgV42Y2deVtJJr15y/JPlus_v2_In-house?node-id=58372-325470&t=SY2lbw7LXtATk9mo-4
Get started	JPLUS app - Broker / Branch / UID	Get started > Pledge/unpledge	-	https://www.figma.com/design/vVW3DEvxP4yN7qA96JXagY/Space-Moblie-V2?node-id=13528-15269&t=wM4cM87Vsjg9ntmr-4

1.6.1. Navigation functionality for pledge/unpledge:

Dedicated Pledge Link with Post-Login Return Navigation

- **As a** client receiving a pledge request link,
  I want to be redirected back to the same pledge page after logging in,
  So that I can complete the pledge process seamlessly without being taken to the Dashboard.

1.6.2. Business Requirement:

- Currently, when a user accesses a pledge/unpledge link and is required to log in, the system redirects the user to the Dashboard after successful authentication. Instead, users who access a pledge-specific link should be redirected back to the same pledge page after login.

- A separate story should be created for this functionality so that its implementation and tracking can be managed independently.

Acceptance Criteria:

1. **When a user clicks a pledge-specific link:**
    - If the user is already logged in, the pledge page should open directly.
    - If the user is not logged in, they should be redirected to the Login page.
2. **After successful login:**
    - The user should be redirected back to the original pledge link/page they attempted to access.
    - The user should not be redirected to the Dashboard.
3. The system should preserve the request context throughout the login process.
4. Existing Dashboard redirection behaviour should remain unchanged for normal login flows that are not initiated through a pledge link.
5. The functionality should be independently tracked under a separate user story for better monitoring and reporting.

1.7. Communication implementation old vs new:

Process	Current Implementation (comet)	New Development
On-market OTP	OTP required via SMS and Mail	OTP will be **discarded** for the process initiated by the client
Off-market OTP	OTP required via SMS and Mail	OTP will be **discarded** for the process initiated by the client
Off-market IPV	IPV link sent to client's registered mobile number (SMS format)	Will continue as is; same SMS format retained

1.7. eDIS API document:

1. eDIS document - New EDIS API 10 APR 2026 (for reference)

2. Margin pledge: Fw_ Margin Pledge API version 2.0 (2).zip (for reference)

2. Requirement Scope:

2.1. Scope Details (Short details of requirement):

The requirement scope for e-DIS process documentation encompasses the comprehensive detailing of on-market, off-market, and pledge transactions within the electronic Delivery Instruction Slip (e-DIS) system. It should include the procedural flow for each transaction type, beginning with the initiation of the e-DIS request by the investor through the brokerage platform, followed by multi-factor authentication and submission to the depository. Additionally, it must cover the verification and processing steps by the depository, execution of verify stocks **(for on-market)**, transfer of securities **(for off-market)**, and the **pledge and unpledge processes**. The documentation should also highlight the roles and responsibilities of all involved parties, security measures, and compliance requirements to ensure a secure and efficient e-DIS process.

Abbreviations & Short forms:

- **CUS** stands for: client user story
- **BUS** stands for: Broker user story

CUS-1 — Verify Stocks (On-Market) Process:

Epic: e-DIS Securities Authorisation

As a non-POA demat account holder,

I want to select stocks I intend to sell, verify the quantity, and authorise the debit via CDSL T-PIN/OTP directly from the Jainam Portal,

So that I can complete my on-market pay-in obligation electronically without submitting a physical POA.

Acceptance Criteria for on-market:

AC1. Only individual clients can initiate on-market e-DIS

AC2. POA/DDPI eligibility gate

- **Given** a client whose profile shows POA = Yes and DDPI = No
- **When** they attempt the on-market verification process.
- **Then** the system must prevent them from proceeding with on-market e-DIS, giving an error that DDPI is not active.

AC3. Quantity validation

- **Given** a client is on the Select Stocks screen or searching for particular stocks that are available in their holding. The search bar should work by stock name only.
- **When** the Selected Quantity for a stock is 0 or blank
- **Then** the system must not allow the request to proceed further

AC4. Multiple demat ID handling

- **Given** a client with more than one linked demat ID
- **When** they initiate the transaction
- **Then** the system must require them to explicitly choose the specific demat ID for the transaction.

AC5. Same-day On+Off market reconciliation

- **Given** a client submitting both On-Market and Off-Market requests on the same day
- **When** the requests are processed

- **Then** the system must tally and verify holdings across both requests, and no duplicate/multiple requests for the same stock across On-Market and Off-Market are allowed.

AC6. Valuation calculation

- **Given** a client has selected a quantity for a stock
- **When** the system computes Max. Valuation
- **Then** it must equal Selected Quantity × Previous Day Close Price

AC7. CDSL cancellation handling

- **Given** a client has been redirected to CDSL for T-PIN/OTP
- **When** the transaction is cancelled from the CDSL end
- **Then** the client must be redirected back to the Jainam Portal without a completed transaction

AC8. Successful submission confirmation

- **Given** the client has completed T-PIN and OTP entry successfully on CDSL
- **When** control returns to the Jainam Portal
- **Then** a confirmation message 'Request has been initiated successfully' must display with a 'View Status' button that redirects to the Transfer Stock History page.

Business Logic / Rules for On-Market:

- Only individual demat holders can initiate the On-Market process — RM, Sub-Broker and Admin are excluded.
- Clients must select a specific demat ID when multiple demat IDs exist.
- If POA = Yes and DDPI = No, on-market e-DIS is blocked for that client.
- Holdings are fetched live from the TechExcel Holding API.
- When a client submits both On-Market and Off-Market requests the same day, holdings must be tallied/verified across both.
- No duplicate (On + Off-Market) requests for the same stock are allowed; if submitted, both holdings and funds must be re-checked and verified.
- Selected Quantity is derived from Total Quantity (cannot exceed it).

- Valuation uses Previous Day Close Price: Max Valuation = Selected Qty × Previous Day Close Price.
- Selected Quantity must be greater than 0, or the request cannot proceed.
- Sellable dates shown in the Sell Date dropdown are sourced from the database (typically only one or two dates available).
- If the transaction is cancelled on the CDSL side, the client is redirected back to the Jainam Portal.
- All submitted requests flow to the Admin Panel for further processing (admin panel currently onboarded).

UI Requirements for on-market:

A. Select Stocks Screen — Table Columns:

Column	Notes
Checkbox	Selects the stock row
Stock	Stock name
Available QTY (i)_	Total available quantity (total quantity - already verified quantity)
Select Qty	Editable; footer shows Max Total
Max. Valuation	Numeric, 2 decimal places (0.00)

B. Other Screen Elements:

- Demat ID selector with dropdown arrow (If applicable) - it will be fixed in all screen expect history
- View History button - it will be fixed on all screen expect history
- Continue button (with number of stocks selected)
- Search bar (Search something here)

C. Authorisation Page:

- Select stock and quantity authorisation journey (with selected scripts and quantities)
- Sell Date dropdown — defaults to the earliest available date
- Continue options below the Demat ID
- Summary table of selected stocks

D. Transaction / Verify Stocks History Page:

- **Header fields:** Demat ID, Request Date, Request ID, Status, view more detail navigation
- **List columns:** Stocks, Selected Quantity, Quantity Verified
- Includes a search bar.

Status handling:

1. **Pending** - when the request is sent to the exchange and verification is pending from the exchange end.
2. **Completed** - when request sent to exchange verified successfully at the exchange end.
3. **Failed** - due to a technical error or API response failure
4. **Cancelled** - When the user cancelled the OTP verification from the CDSL site.
5. **Rejected** - when the exchange rejected the verification request due to some reason

E. Transaction / Verify Stocks detail History Page:

- **Header fields:** Demat ID, Request ID, Status
- **Status journey:** Verify request date, Exchange status, verify request cancelled, verify request rejected
- **List columns:** Stocks, Selected Quantity, Qty Verified

Process Flow for on-market:

Step 1 — Client logs into the JPLUS → Dashboard → My investment → selects 'Verify Stocks (On market)' from the transaction-type options (Pledge/Unpledge, Transfer Stocks, Verify Stocks) or selects Verify Stocks from the holdings.

Step 2 — Client is shown the stocks table, selects stock(s) via checkbox, and edits Selected Quantity; Max. Valuation is auto-computed.

Step 3 — Client clicks Continue → Authorisation page → chooses Sell Date from dropdown → reviews the summary table of selected stocks.

Step 4 — Client is redirected to the CDSL site, enters T-PIN, then enters OTP. (if continuing with TPIN verification)

Step 5 — Client is redirected to the CDSL site to create their own TPIN; once the user has created their own TPIN, redirect them to the first page to repeat the process again.

Step 6 — Client is redirected back to the Jainam Portal; a success message displays with a 'View Status' button, which opens the Transfer Stock History page.

On-market Client-Side Flow:

Step	Client Action	System Response
1	Log in to JPLUS	Dashboard loads
2	Navigate: My investment → Verify Stocks (On market)	Stocks table displayed
OR	Navigate: Holdings from JPLUS dashboard and click on any eDIS functionality	Stock table displayed in specific eDIS functionality
3	Select stock(s), enter Selected Qty	Max. Valuation auto-calculated; Continue enabled once Qty > 0
4	Click Continue	Authorisation page opens; select Sell Date with stock summary
5	Click Continue on Authorisation page	Redirect to CDSL site

6	Enter T-PIN or create TPIN, then OTP on CDSL	CDSL validates and processes the debit instruction/ redirect them to the first page of the verify stocks screen to repeat the process
7	Redirected back to JPLUS	'Request initiated successfully' message + View Status button shown
8	Click View Status	Transfer Stock History page opens with request details

CUS-2 — Transfer Stocks (Off-Market) Process:

Epic: e-DIS Securities Authorisation

As a demat account holder,

I want to select stocks, specify a receiving demat account and reason, and authorise the transfer via CDSL T-PIN/OTP followed by IPV,

So that I can move securities to another demat account (gift, family transfer, own account, etc.) outside the exchange, fully electronically.

Acceptance Criteria for off-market:

AC1. POA/DDPI is not a blocker for off-market

- **Given** a client with POA = No and DDPI = Yes (or any POA/DDPI combination)
- **When** they initiate an off-market transfer
- **Then** the system must allow the process to proceed — off-market has no POA/DDPI restriction

AC2. Transfer value cap:

- **Given** a client has selected stocks worth more than ₹2,00,000
- **When** they attempt to proceed

- **Then** the system must display: "You can't transfer stocks worth more than 2 lakhs. Please transfer stocks that are worth less than 2 lakhs." and block progress

AC3. Sender ≠ Receiver Demat ID

- **Given** a client enters a receiver Demat ID identical to the sender Demat ID
- **When** they attempt to proceed
- **Then** the system must display: "Demat ID and receiver's Demat ID should be different" and block progress

AC4. Re-type Demat ID match

- **Given** a client re-types the Demat ID and it does not match the first entry
- **When** they attempt to proceed
- **Then** the system must display: "Re-type Demat ID does not match the Demat ID" and block progress

AC5. Non-Jainam Demat ID requires upload

- **Given** the receiver's Demat ID does not belong to Jainam DP
- **When** the client proceeds
- **Then** the system must require a mandatory upload of the DP details profile (Client Master), PDF format only

AC6. IPV is mandatory for completion

- **Given** a client has completed CDSL T-PIN/OTP authorisation
- **When** IPV has not yet been completed
- **Then** the transaction status must remain 'IPV Pending' and not be marked complete

AC7. IPV link expiry

- **Given** a client selects 'Do IPV Later'
- **When** more than one hour has elapsed since the link was issued
- **Then** the IPV link must be expired and no longer usable

AC8. After-cutoff IPV link timing

- **Given** a client performs the off-market process after 5 PM
- **When** the IPV link is generated
- **Then** it must be sent to the client the next day at 10:00 AM

Business Logic / Rules for off-market:

- Searching for particular stocks that are available in their holdings. The search bar should work by stock name only.
- Clients must select a specific demat ID when multiple demat IDs exist for particular clients.
- No POA/DDPI restriction applies — off-market can proceed regardless of POA/DDPI status.
- Holdings are fetched from the TechExcel Holding API; Selected Quantity is taken from the total holding quantity.
- Valuation uses the previous day's close price for equities; for liquid assets (gold, silver, bonds, G-Sec), the price is fetched from the Bhav Copy for that day.
- No VAR margin or after-haircut valuation is required in the off-market process (unlike Pledge).
- Max Valuation = Selected Qty × Previous Day Close Price.
- Sender and receiver Demat IDs must differ; retyped Demat ID must match the original entry.
- Name is auto-fetched when the client has a Jainam demat ID; for any other DP, a Client Master (DP profile) PDF upload is mandatory.
- Reason for transfer must be selected from a fixed list (Gift, Off-market sale/purchase, Transfer to own account(s), Open account for acquisition, Margin to stock broker/PCM, Redemption of mutual fund units, Transfer between specified family members, Between partner & firm or director & company).
- Transaction is successful only after IPV is completed; without IPV, the transaction is not considered complete.
- IPV link (if deferred) expires after 1 hour; if the off-market request is made after 5 PM, the IPV link is sent the next day at 10 AM.
- The request is visible on the Admin Panel for further processing.

UI Requirements for off-market:

A. Select Stocks Screen — Table Columns:

Column	Notes
Stocks	Stock name, with selection checkbox
Available QTY (i)	Total available quantity (total quantity - already transferred quantity)
Select Qty	Editable; footer shows Max Total
Max. Valuation	Numeric, 2 decimal places (0.00); triggers ₹2 lakh cap validation

B. Other Screen Elements:

- Demat ID dropdown (if applicable) - it will be fixed in all screens except history
- View History button - it will be fixed in all screens except history
- Continue button(with number of stocks selected)
- Search bar

C. Authorisation Page:

- Select stock and quantity authorisation journey (with selected scripts and quantities)
- Demat ID field
- Re-type Demat ID field
- Name (auto-fetched for Jainam demat ID)
- Reason dropdown (fixed list)
- Client Master Uploader (PDF only, for non-Jainam demat ID)
- Summary table of selected stocks
- Continue option

D. Transfer Stock History Page:

- **Header fields:** From Demat ID, To Demat ID, Request Date, Request ID, Status, View more details navigation
- **List columns:** Stocks, Transferred Qty, Total Qty
- Includes a search bar.

E. Transfer Stock History Detail Page:

- **Header fields:** From Demat ID, To Demat ID, Request ID, Status
- **Status journey:** Transfer request date, Exchange status, Transfer Request canceled, Transfer Request Rejected
- **List columns:** Stocks, Transferred Qty, Total Qty

Process Flow for client side:

Step 1 — Client logs in → Portfolio → Holdings → selects 'Transfer Stocks'. Or selects from the JPLUS dashboard > My Investment> Transfer Stocks from the JPLUS dashboard.

Step 2 — Client selects stock(s) and edits Selected Qty; system validates the ₹2 lakh valuation cap.

Step 3 — Client proceeds to the Authorisation page: enters Demat ID, re-types Demat ID (name auto-fetched for Jainam clients), selects Reason, uploads Client Master PDF if non-Jainam demat ID.

Reason:

LIST OF REASONS:

1. Gift
2. For off-market sale/purchase
3. Transfer to own account(s)
4. Open account for acquisition
5. Margin to stock broker/PCM
6. Redemption of manual fund units

7. Transfer between specified family MEMBER 1
8. Between partner&firm or director&Company

Step 4 — Client authorises; redirected to CDSL site; enters T-PIN and OT or if client authorises by create your own TPIN, redirect to the CDSL site to create a new TPIN and come back to the off-market dashboard page where available holdings are available for off-market transfer.

Step 5 — Client is redirected to Jainam Portal; success message shown with 'Do IPV Now' / 'Do IPV Later' options; upon IPV completion, client is redirected to Transfer Stock History.

If the client clicks on 'Do IPV Now ', then the IPV link is sent to the client's registered mobile number. For IPV, the client needs to record a video with 4 points,

- 1. Date & time
- 2. Client NAME
- 3. Target Boid
- 4. Total script number

Please note: for IPV SMS and mail, use old content to send the link.

Off-market Client-Side Flow:

Step	Client Action	System Response
1	Log in → Portfolio → Holdings → Transfer Stocks	Stocks table displayed
OR	Navigate: Holdings from JPLUS dashboard and click on any eDIS functionality	Stock table displayed in specific eDIS functionality
2	Select stocks, enter Selected Qty	Max. Valuation computed; ₹2L cap enforced
3	Click Continue	Authorisation page opens

4	Enter Demat ID, re-type Demat ID, select Reason, upload Client Master (if applicable)	Validation: sender ≠ receiver, re-type match, mandatory upload check
5	Authorise and proceed	Redirect to CDSL site
6	Enter T-PIN or create TPIN, then OTP on CDSL	CDSL validates and processes the debit instruction/ redirect them to the first page of off market dashboardto repeat the process
7	Redirected to Jainam Portal	Success message + 'Do IPV Now' / 'Do IPV Later' shown
8	Complete IPV (now or later, within 1 hr if later)	Redirected to Transfer Stock History page

CUS-3 — Pledge Process:

Epic: e-DIS Securities Authorisation

As a demat account holder,

I want to select eligible stocks, view their after-haircut valuation, and authorise a pledge via CDSL OTP,

So that I can use my holdings as collateral for margin trading without transferring ownership.

Acceptance Criteria for pledge:

AC1. 100% VAR margin stocks excluded

- **Given** a stock carries 100% VAR margin
- **When** the client views the pledge stock list

- **Then** that stock must not be selectable, and a message must indicate that pledging is not allowed for 100% VAR margin stocks

AC2. After-haircut valuation displayed

- **Given** a client has selected a quantity to pledge
- **When** the system calculates values
- **Then** both Valuation (selected qty × previous close price) and After Haircut valuation (current VAR margin × closing price) must be shown

AC3. Dual confirmation required

- **Given** a client is on the Quantity & Authorisation step
- **When** they attempt to proceed
- **Then** both checkboxes ('I authorise to pledge my stocks selected above' and 'I agree and confirm to have read and understood the terms and conditions for pledging') must be checked before continuing

AC4. Post-cutoff crediting

- **Given** a client submits a pledge request after 7 PM
- **When** the request is processed
- **Then** the pledge margin must be credited only the next day after 12:00 PM

AC5. PSN unavailability handling

- **Given** the CDSL API is closed at the time of pledge submission
- **When** a PSN number cannot be generated
- **Then** the status must display as 'PSN Pending'

AC6. Restriction after corporate action

- **Given** a stock is under an active corporate action bid (takeover, buyback, or delisting)
- **When** a client attempts to pledge it
- **Then** the pledge action must be restricted/blocked

Business Logic / Rules for pledge:

- Client must select a specific demat ID when multiple demat IDs exist.

- Holdings fetched from the TechExcel Holding API; Selected Quantity taken from total holding quantity.
- Max Valuation = Selected Qty × previous day's closing price.
- After-haircut value = current VAR margin of the stock × closing price.
- Stocks at 100% VAR margin are not eligible for pledging — a blocking message must be shown.
- Two confirmation checkboxes are mandatory before proceeding to CDSL authorisation.
- Pledge requests submitted after 7 PM: pledge margin is credited the next day after 12:00 PM.
- If the CDSL API is unavailable, PSN-related errors occur; status shows 'PSN Awaited' / 'Pending'.
- The history page must always show the PSN number and the Reason — both are compulsory.
- Pledging is restricted after a corporate action bid (takeover, buyback, delisting) is in effect on the stock.
- Requests are visible on the Admin Panel for further processing.

UI Requirements for pledge:

A. Select Stocks Screen — Table Columns:

Column	Notes
Select stocks and quantity authorisation flow	Initially, selecting a stock should be enabled.
Stock	Stock name, with selection checkbox
Available QTY (i)	Total available quantity (total quantity - already pledged quantity)
Valuation	Selected qty × previous close price
After Haircut	Current Hr rate margin × closing price

- Disabled Stocks which have a VAR margin of 100% or are unapproved are not eligible for pledging.

B. Other Screen Elements:

- Demat ID dropdown (If applicable) - It will be fixed on all the screen expect history page.
- View History button - It will be fixed on all screens except the History page.
- Continue button(with number of stocks selected)
- Search bar
- Pledge / Unpledge toggle button at top of page

C. Quantity & Authorization Page:

- Select stock and quantity authorisation journey (with selected scripts and quantities)
- **Table columns:** Stocks, Available Qty, Pledge Qty, Valuation, After Haircut
- Two mandatory confirmation checkboxes (authorise pledge; agree to terms &conditions)
- 'Send Pledge Request' button

D. Pledge History Page:

- **Header fields:** Demat ID, Request date, Request ID, Transaction Type (Pledge / Unpledge), Status
- Search bar

E. Pledge History Detail Page:

- Demat ID, Request ID, Transaction Type, Status
- **Status Journey:** Pledge request date, Exchange Status, PSN generated, Pledge request rejected, Pledge Request cancelled

- **List columns:** Stocks, Pledged Qty, Valuation, After Haircut, Reason

Process Flow for Pledge:

Step 1 — Client logs in → Dashboard → selects 'Pledge/Unpledge ' → chooses Pledge Or clicks on pledge/unplede from the holdings

Step 2 — Client is shown eligible stocks (100% VAR margin stocks excluded); selects stock(s) to pledge.

Step 3 — Client enters Pledge Qty on the Quantity & Authorization screen; reviews Valuation / After Haircut; checks both confirmation boxes.

Step 4 — Client is redirected to CDSL for OTP authorisation.

Step 5 — Client returns to portal; on success, message 'Pledge report sent' displays with a 'View Status' button leading to Pledge History; on failure, a technical-error message directs the client to contact RM/SB/BM.

Client-Side Flow for pledge:

Step	Client Action	System Response
1	Log in → Portfolio → Holdings → Pledge/Unpledge Stocks → Pledge	Eligible stocks table displayed (100% VAR excluded)
OR	Navigate: Holdings from JPLUS dashboard and click on any eDIS functionality	Stock table displayed in specific eDIS functionality
2	Select stock(s)	Valuation and After Haircut computed
3	Enter Pledge Qty	Quantity & Authorisation screen updates totals
4	Check both confirmation boxes	'Send Pledge Request' enabled

5	Submit and authorise via CDSL OTP	CDSL processes pledge instruction, returns PSN
6	Redirected to Jainam Portal	'Pledge report sent' + View Status button (or error message on failure)
7	Click View Status	Pledge History page opens with PSN, valuation, status

CUS-4 — Unpledge Process:

Epic: e-DIS Securities Authorisation

As a demat account holder who has previously pledged securities,

I want to select pledged stocks and release them back to my free holdings via CDSL authorisation,

So that I can reclaim my securities once the underlying loan/margin obligation is settled.

Acceptance Criteria for unpledge:

AC1. No VAR/haircut requirement

- **Given** a client is on the unpledge Quantity & Authorisation screen
- **When** the system computes values
- **Then** no VAR margin or after-haircut valuation is required or shown — only Valuation at the previous day's close price

AC2. Quantity bound by pledged holding

- **Given** a client selects an unpledge quantity

- **When** they attempt to proceed
- **Then** the Select Un-pledged Qty must not exceed the stock's total Pledged Qty (Max Total)

AC3. Dual confirmation required

- **Given** a client is on the Quantity & Authorisation step
- **When** they attempt to proceed
- **Then** both checkboxes ('I authorise to unpledge...' and 'I agree and confirm to have read and understood the terms and conditions...') must be checked before continuing.

AC4. Margin short-sell restriction

- **Given** a client has an open margin short-sell position
- **When** they attempt to unpledge securities
- **Then** the system must enforce the minimum margin requirement before allowing the unpledge

Business Logic / Rules for unpledge:

- Client must enter the Demat ID from which the stocks were originally pledged.
- No VAR margin or after-haircut valuation applies in the unpledge process.
- Valuation = Selected unpledge quantity × previous day close price.
- Unpledge quantity is bound by (cannot exceed) the total pledged quantity.
- Two confirmation checkboxes are mandatory before proceeding.
- Unpledge completes only once the broker has completed the request; otherwise, status remains Pending.
- If the client holds a margin short-sell position, the minimum margin requirement must be maintained before unpledge is permitted.
- History page shows only Stocks, Selected Quantity and Unpledged Quantity — no Reason or PSN number required (unlike Pledge history).

UI Requirements for unpledge:

A. Select Stocks Screen — Table Columns:

Column	Notes
Select stocks and quantity authorisation flow	Initially, selecting a stock should be enabled.
Stocks	Stock name, with selection checkbox
Pledged Qty	Max Total shown at column footer
Valuation	Numeric, 2 decimal places (0.00)

B. Other Scre en Elements:

- Demat ID Dropdown (if applicable)
- View History
- Search bar
- Continue button (with number of stocks)
- Pledge/Unpledge toggle button at top of page

C. Quantity & Authorization Page:

- Select stock and quantity authorisation journey (with selected scripts and quantities)

- **Table columns:** Stocks, Pledged Qty, Select Unpledged Qty (with Max Total), Valuation
- DP ID field
- 'Send Unpledge Request' button
- Two mandatory confirmation checkboxes

D. Unpledge History Page:

- **Header fields:** Demat ID, Request Date, Status
- **List columns:** Stocks, Selected Quantity, Unpledged Quantity
- Search bar included. No Reason or PSN column required.

E. Unpledge History Page:

- Demat ID, Request ID, Transaction Type, Status
- **Status Journey:** Unpledge request date, Exchange Status, Unpledge request rejected
- **List columns:** Stocks, Pledged Qty, unpledge quantity

Process Flow for unpledge:

Step 1 — Client logs in → Dashboard → 'Pledge/Unpledge Stocks' → selects Unpledge or selects unpledge from the JPLUS dashboard.

Step 2 — Client views pledged stocks table and selects stock(s) to unpledge.

Step 3 — Client specifies Select Unpledged Qty (≤ Pledged Qty) on the Quantity & Authorization screen; checks both confirmation boxes.

Step 4 — Client needs to send an unpledge request so the unpledge request is sent successfully.

Client-Side Flow for unpledge:

Step	Client Action	System Response

1	Log in → Portfolio → Holdings → Pledge/Unpledge Stocks → Unpledge	Pledged stocks table displayed
OR	Navigate: Holdings from JPLUS dashboard and click on any eDIS functionality	Stock table displayed in specific eDIS functionality
2	Select stock(s)	Valuation computed
3	Enter Select Un-pledged Qty (bounded by Pledged Qty)	Quantity & Authorization screen updates
4	Check both confirmation boxes	'Send Unpledge Request' enabled
5	Submit request	'Un-pledge request sent' + View Status button (or error message)
6	Click View Status	Unpledge History page opens; status shows Pending until broker completes

BUS-1 — Pledge Process:

Epic: Broker-Assisted e-DIS Authorisation

As a **Broker** acting on behalf of a client,

I want to search for a client by client code, select eligible stocks from their holdings, and submit a pledge request authorised via CDSL OTP,

So that I can help my client pledge securities as collateral without the client needing to perform the transaction themselves.

Acceptance Criteria for pledge:

AC1. Client selection via client code is mandatory

- **Given** a broker on the Holdings page
- **When** they want to initiate a pledge for a client

- **Then** they must enter the client code and click View before any client holdings are displayed

AC2. 100% VAR margin stocks excluded

- **Given** a stock carries 100% VAR margin
- **When** the Broker views the pledge stock list for a client
- **Then** that stock must not be selectable, and a message must indicate that pledging is not allowed as the stock is in 100% VAR margin

AC3. Unapproved stocks excluded

- **Given** a stock is classified as 'unapproved' per the approved stock report (COMET)
- **When** the Broker views the pledge stock list for a client
- **Then** that stock must not be selectable, and a message must indicate that pledging is not allowed as the stock is unapproved

AC4. After-haircut valuation displayed

- **Given** the Broker has entered a Pledge Qty for a stock
- **When** the system calculates values
- **Then** both Valuation (selected qty × previous day close price) and After Haircut valuation (current VAR margin × closing price) must be shown

AC5. Dual confirmation required

- **Given** the Broker is on the Quantity & Authorisation step
- **When** they attempt to proceed
- **Then** both checkboxes ('I authorise to pledge my stocks selected above' and 'I agree and confirm to have read and understood the terms and conditions for pledging') must be checked before continuing

AC6. Post-cutoff crediting

- **Given** a broker submits a pledge request after 7 PM
- **When** the request is processed
- **Then** the pledge margin must be credited only the next day after 12:00 PM

AC7. PSN unavailability handling

- **Given** the CDSL API is closed at the time of pledge submission

- **When** a PSN number cannot be generated
- **Then** the status must display as 'PSN Awaited' / 'Pending'

AC8. Successful vs failed submission messaging

- **Given** the Broker has completed CDSL OTP authorisation
- **When** control returns to the JPLUS portal
- **Then** on success, a 'Pledge report sent' message with a 'View Status' button must display; on failure, a technical-error message directing the Broker to contact RM/SB/BM must display

Business Logic / Rules for pledge:

- Broker must enter the specific Demat ID/client code when the client is associated with multiple demat IDs.
- Holdings are fetched from the TechExcel Holding API.
- Selected/Pledge Quantity is taken from the client's total holding quantity.
- Max Valuation = Selected Quantity × previous day close price.
- After-haircut value = current VAR margin of the stock × closing price.
- Stocks at 100% VAR margin are not eligible for pledging.
- Stocks classified as unapproved (per the approved stock report maintained in COMET) are also not eligible for pledging.
- When a stock is ineligible (100% VAR or unapproved), an on-screen message must state that pledging is not allowed for that reason.
- Two confirmation checkboxes are mandatory before proceeding to CDSL OTP authorisation.
- Pledge requests submitted after 7 PM: pledge margin is credited the next day after 12:00 PM.

- If the CDSL API is unavailable, PSN-related errors occur; status shows 'PSN Awaited' / 'Pending'.
- History page must always show the PSN number and the Reason — both are compulsory fields.
- Requests are visible on the Admin Panel for further processing.

UI Requirements for pledge:

A. Holdings Page — Client Search:

- Enter Client Code field
- View button

Flow: Log into JPLUS > Select pledge option from dashboard > Search Client Code > Submit button > holdings available for pledging

A. JPLUS web dashboard Page — Client Search:

- Pledge and unpledge links display on screen
- Clicks on pledge; enter client code screen opens where broker needs to enter client code

A. JPLUS APP dashboard Page — Client Search:

- Pledge/unpledge option logged in **get started** section.
- Clicks on pledge/unpledge; enter client code screen opens where broker needs to enter client code
- Holdings available for pledge will display here.

B. Select Stocks Screen — Table Columns:

Column	Notes
Select stocks and quantity authorisation flow	Initially, selecting a stock should be enabled.

Stock	Stock name, with selection checkbox
Total Qty	Total holding quantity
Valuation	Selected qty × previous close price
After Haircut	Current VAR margin × closing price

Stocks with 100% VAR margin or classified as unapproved are excluded/shown as ineligible.

C. Other Screen Elements:

- Demat ID dropdown (If applicable)
- View History button
- Continue button above the After Haircut column
- Search bar
- Pledge/Unpledge toggle button at top of page
- Flow breadcrumb: Reports > Portfolio > Holdings > Search Client Code > Submit

D. Quantity & Authorization Page:

Table columns: Stocks, Total Qty, Pledge Qty, Valuation, After Haircut

- Search bar
- Two mandatory confirmation checkboxes (authorize pledge; agree to terms & conditions)
- Back and 'Send Pledge Request' buttons

E. Pledge History Page:

- **Header fields:** Demat ID, Request Date, Request ID, Transaction Type (PLedge/Unpledge), Status, View More

E. Pledge History Detail Page:

- **Header fields:** Demat ID, Request ID, Transaction Type (PLedge/Unpledge), Status, Client Code
- **List columns:** Stocks, Pledged Qty, Valuation, After Haircut
- **Status history journey:** sent date, exchange status, PSN generated

F. JPLUS APPLICATION UI:

Pledge	Components
Magin disclosure	Bottom sheet opens on the dashboard
DPID	Dropdown if applicable; otherwise, show as default (disabled - view-only state)
Info button and search bar	Disabled Stocks which have a VAR margin of 100% or are unapproved are not eligible for pledging. / search stocks
Stocks	Available holdings visible (along with checkbox for selection and select all option)
Available QTY (i)	Total available quantity (total quantity - already pledged quantity)
Valuation	Selected qty × previous close price
After Haircut	Current Hr rate margin × closing price
Continue	CTA (initially disabled state)
Search bar	Search functionality for stocks only
OTP screen	For client consent (a 4-digit OTP will be applied when client consent is taken)
Submit button on OTP screen	Initially in disabled state; after entering OTP, enable state

Terms and conditions	Terms and conditions and authorise to pledge Checkbox (compulsory to proceed further) along with send pledge request button
Request success, cancelled, failed	Bottom sheet (will come as per respective criteria)
History page	Demat ID, Status, view more details, transaction type, search bar, request date
History detail page	Demat ID, Request ID, Transaction type, Status, Pledge request journey (sent date, exchange status, PSN status), stock name, pledged QTY, valuation, After haircut

Process Flow for pledge:

Step 1 — Broker logs into JPLUS with their Broker login code → JPLUS dashboard → Pledge select → Holdings or select pledge/unpledge from holdings or select pledge/unpledge from JPLUS app >get started > pledge/unpledge

Step 2 — Broker enters the client code and clicks View to load that client's holdings.

Step 3 — Broker is shown eligible stocks (100% VAR margin or unapproved stocks excluded); selects stock(s) to pledge.

Step 4 — Broker needs to enter OTP before proceeding with the pledge request.

Step 5 — Broker enters Pledge Qty on the Quantity & Authorization screen; reviews Valuation / After Haircut; checks both confirmation boxes.

Step 6 — Broker is redirected to CDSL for OTP authorisation.

Step 7 — Broker returns to JPLUS portal; on success, 'Pledge report sent' displays with a 'View Status' button leading to Pledge History; on failure, a technical error message directs the Broker to contact RM/SB/BM.

Broker-Side Flow for pledge - WEB:

Step	Broker Action	System Response
1	Log in to JPLUS with Broker login code	Dashboard loads
2	Select pledge option from the dashboard	Dashboard process for pledge
OR	Navigate: Holdings from JPLUS dashboard and click on any eDIS functionality	Stock table displayed in specific eDIS functionality
3	Enter Client Code, click View	Client's holdings loaded
4	Holdings available for pledging	Eligible stocks table displayed (100% VAR and unapproved stocks excluded)
5	Select stock(s)	Valuation and After Haircut computed
6	Enter Pledge Qty	Quantity & Authorisation screen updates totals
7	Check both confirmation boxes	'Send Pledge Request' enabled
8	Submit and authorise via CDSL OTP	CDSL processes pledge instruction, returns PSN
9	Redirected to JPLUS portal	'Pledge request sent' + View Status button (or error message on failure)
10	Click View Status	Pledge History page opens with PSN, valuation, status for the client

Broker-Side Flow for pledge - APPLICATION:

Step	Broker Action	System Response
1	Log in to JPLUS app with Broker login code	Dashboard loads

2	Select pledge/unpledge option from get started section	Client code screen opens
3	Enter Client Code, click View	Client's holdings loaded (in pledge section)
4	Holdings available for pledging	Eligible stocks table displayed (100% VAR and unapproved stocks excluded)
5	Select stock(s)	Valuation and After Haircut computed
6	Enter Pledge Qty	Quantity & Authorisation screen updates totals
7	OTP consent taken from client	OTP sent to client's registered mobile number
8	Check both confirmation boxes	'Send Pledge Request' enabled
9	Webview open for CDSL OTP auth	Client action on CDSL page
10	Redirected to JPLUS APP	'Pledge request sent' + View Status button (or error message on failure)
11	Click View Status	Pledge History page opens with PSN, valuation, status for the client

BUS-2 — Unpledge Process:

Epic: Broker-Assisted e-DIS Authorisation

As a Broker acting on behalf of a client,

I want to search for a client by client code, select previously pledged stocks, and submit an unpledge request authorised by the client,

So that I can help my client release securities that were pledged as collateral once they are no longer needed as collateral.

Acceptance Criteria for unpledging:

AC1. Client selection via client code is mandatory

- **Given** an SB/RM on the Holdings page
- **When** they want to initiate an unpledge for a client
- **Then** they must enter the client code and click View before that client's pledged stocks are displayed

AC2. No approved/unapproved gating on unpledge

- **Given** a stock was previously pledged regardless of its current approved/unapproved status
- **When** the SB/RM views the unpledge stock list
- **Then** the approved/unapproved eligibility check must NOT be applied — that logic is specific to the Pledge process only

AC3. No VAR/haircut requirement

- **Given** the SB/RM is on the unpledge Quantity & Authorisation screen
- **When** the system computes values
- **Then** no VAR margin or after-haircut valuation is required or shown — only Valuation at the previous day close price

AC4. Quantity bound by pledged holding

- **Given** the SB/RM selects an unpledge quantity
- **When** they attempt to proceed
- **Then** the Select Un-pledged Qty must not exceed the stock's total Pledged Qty (Max Total)

AC5. Dual confirmation required

- **Given** the SB/RM is on the Quantity & Authorisation step
- **When** they attempt to proceed

- **Then** both checkboxes ('I authorise to unpledge my stocks selected above' and 'I agree and confirm to have read and understood the terms and conditions for pledging') must be checked before continuing

AC6. Broker completion dependency

- **Given** an unpledge request has been submitted
- **When** the broker back-office has not yet completed processing it
- **Then** the status must display as 'Pending' until the broker completes the request

AC7. Margin short-sell restriction

- **Given** the client has an open margin short-sell position
- **When** the SB/RM attempts to unpledge securities for that client
- **Then** the system must enforce the minimum margin requirement before allowing the unpledge

Business Logic / Rules for unpledging:

- SB/RM must enter the Demat ID/client code from which the stocks were originally pledged.
- The approved/unapproved stock eligibility logic used in Pledge must be removed from Unpledge — it applies only to the Pledge process.
- No VAR margin or after-haircut valuation applies in the unpledge process.
- Valuation = Selected unpledge quantity × previous day close price.
- Unpledge quantity is bound by (cannot exceed) the total pledged quantity.
- OTP confirmation should be compulsory before proceeding with the unpledge request.
- Two confirmation checkboxes are mandatory before proceeding.
- Unpledge completes only once the broker back-office has completed the request; otherwise, status remains Pending.

- If the client holds a margin short-sell position, the minimum margin requirement must be maintained before unpledge is permitted.
- History page shows only Stocks, Selected Quantity and Unpledged Quantity — no Reason or PSN number required (unlike Pledge history).

UI Requirements for unpledge:

A. Holdings Page — Client Search:

- Enter Client Code field
- View button

Flow: Log into JPLUS Portal > Unpledge > search client code > submit button > Pledged stocks available for unpledging

A. JPLUS web dashboard Page — Client Search:

- Pledge and unpledge links display on screen
- Clicks on unpledge; enter client code screen opens where broker needs to enter client code

A. JPLUS APP dashboard Page — Client Search:

- Pledge/unpledge option logged in **get started** section.
- Clicks on pledge/unpledge; enter client code screen opens where broker needs to enter client code
- Available pledged stocks displayed on the screen

B. Select Stocks Screen — Table Columns:

Column	Notes
Pledged Stock	Stock name, with selection checkbox
Pledged QTY	Total pledged holdings available

Valuation	Selected qty × previous close price

C. Other Screen Elements:

- Demat ID dropdown (if applicable)
- View History
- Continue button
- Search bar
- Pledge/Unpledge toggle button at top of page
- Flow breadcrumb: Reports > Portfolio > Holdings > Search Client Code > Submit

D. Quantity & Authorization Page:

- Select stock and quantity authorisation journey (with selected scripts and quantities)
- **Table columns:** Stocks, Pledged Qty, Select Unpledged Qty (with Max Total), Valuation
- DP ID field
- 'Send Unpledge Request' button
- Two mandatory confirmation checkboxes

D. Unpledge History Page:

- **Header fields:** Demat ID, Request Date, Status
- **List columns:** Stocks, Selected Quantity, Unpledged Quantity
- Search bar included. No Reason or PSN column required.

E. Unpledge History Detail Page:

- Demat ID, Request ID, Transaction Type, Status, Client code

- **Status Journey:** Unpledge request date, Exchange Status, Unpledge request rejected
- **List columns:** Stocks, Pledged Qty, unpledge quantity

F. JPLUS APPLICATION UI:

Unpledge	Components
Unpledge disclosure	Bottom sheet opens on the dashboard
DPID	Dropdown if applicable; otherwise, show as default (disabled - view-only state)
Stocks	Available holdings visible (along with checkbox for selection and select all option)
Pledged QTY	Already pledged stocks display here
Valuation	Selected qty × previous close price
Continue	CTA (initially disabled state)
Authorization page	DPID (non-changeable), Stock name, pledged QTY, Unpledge QTY selection, valuation, terms and conditions, authorise to unpledge checkbox (compulsory to proceed further)
Send unpledge request	CTA
OTP screen	For client consent (a 4-digit OTP will be applied when client consent is taken)
Submit button on OTP screen	Initially in disabled state; after entering OTP, enable state
Request success, cancelled, failed	Bottom sheet (will come as per respective criteria)

History page	Demat ID, Status, view more details, transaction type, search bar, request date
History detail page	Demat ID, Request ID, Transaction type, Status, Unpledge request journey (sent date, exchange status), stock name, pledged QTY, Unpledged QTY, valuation, total valuation

Process Flow for unpledging:

Step 1 — Broker logs into JPLUS with their Broker login code → JPLUS dashboard → Unpledge select → Holdings **or** select pledge/unpledge from holdings **or** select pledge/unpledge from get started > JPLUS APP

Step 2 — Broker enters the client code and clicks View to load that client's holdings.

Step 3 — Broker selects 'Pledge/Unpledge Stocks' → Pledge from the Transaction Type table.

Step 4 — Broker is shown eligible stocks (100% VAR margin and unapproved stocks excluded); selects stock(s) to pledge.

Step 5 — Broker enters Pledge Qty on the Quantity & Authorization screen; reviews Valuation / After Haircut; checks both confirmation boxes.

Step 6 — Broker is redirected to CDSL for OTP authorisation.

Step 7 — Broker returns to JPLUS portal; on success, 'Pledge report sent' displays with a 'View Status' button leading to Pledge History; on failure, a technical-error message directs the Broker to contact RM/SB/BM.

Broker-Side Flow for unpledge - WEB:

Step	Broker Action	System Response

1	Log in to JPLUS with Broker login code	Dashboard loads
2	Select the unpledge option from the dashboard	Dashboard process for unpledge
OR	Navigate: Holdings from JPLUS dashboard and click on any eDIS functionality	Stock table displayed in specific eDIS functionality
3	Enter Client Code, click View	Client's holdings loaded
4	Pledged stocks available for unpleging	Eligible stocks table displayed for unpledging
5	Select stock(s)	Valuation and After Haircut computed
6	Enter Pledge Qty	Quantity & Authorisation screen updates totals
7	Check both confirmation boxes	'Send Pledge Request' enabled
8	Submit and authorise via CDSL OTP	CDSL processes pledge instruction, returns PSN
9	Redirected to JPLUS portal	'unPledge request sent' + View Status button (or error message on failure)
10	Click View Status	Pledge History page opens with PSN, valuation, status for the client

Broker-Side Flow for unpledge - APPLICATION:

Step	Broker Action	System Response
1	Log in to JPLUS app with Broker login code	Dashboard loads

2	Select pledge/unpledge option from get started section	Client code screen opens
3	Enter Client Code, click View	Client's pledged holdings loaded (in Unpledge section)
4	Pledged stocks available for unpleging	Eligible stocks table displayed for unpledging
5	Select stock(s)	Valuation
6	Enter Unpledge Qty	Quantity & Authorisation screen updates totals
7	Check both confirmation boxes	'Send Pledge Request' enabled
8	OTP consent taken from client for unpledge process	4-digit OTP required, and it will be sent to the client's registered mobile number
9	Redirected to JPLUS APP	'Unpledge request sent' + View Status button (or error message on failure)
10	Click View Status	Unpledge History page opens with unpledged stocks, quantity, status journey

2.3. SMS content and mail content for OTP:

SMS Content:

1. Pledge request (will be used in JPLUS web and app)

- Sender ID: JNMOTP
- Type: IMPLICIT
- SMS template name: Pledge request initiated by broker

SMS content:

{#VAR#} is your OTP for the pledge request initiated by broker {#VAR#}. Do not share it with anyone. Team Jainam Broking Limited

Sample content:

7890 is your OTP for the pledge request initiated by broker KCV. Do not share it with anyone. Team Jainam Broking Limited

2. Unpledge request: (will be used in JPLUS web and app)

- Sender ID: JNMOTP
- Type: IMPLICIT
- SMS template name: Unpledge request initiated by broker

SMS content:

{#VAR#} is your OTP for the Unpledge request initiated by broker {#VAR#}. Do not share it with anyone. Team Jainam Broking Limited

Sample content:

7890 is your OTP for the Unpledge request initiated by broker KCV. Do not share it with anyone. Team Jainam Broking Limited

Email content and format: (will be used in JPLUS web and app)

1. **Pledge request:**

OTP for Pledge Request initiated by broker

Dear Neel rajeshbhai gandhi,

Your One-Time Password (OTP) to authorise the pledge request initiated by your broker is:

7080

Please do not share this OTP with anyone.

Regards,

Jainam Broking Limited

2. **Unpledge request:**

OTP for Unpledge Request

Dear Neel rajeshbhai gandhi,

Your One-Time Password (OTP) to authorise the unpledge request initiated by your broker is:

7080

Please do not share this OTP with anyone.

Regards,

Jainam Broking Limited

2.4. Terms and conditions for pledge and unpledge:

PLEDGE & UNPLEDGE:

1. The pledgee undertakes to provide reasonable notice to the pledger and comply with the requirements of Sections 176 and 177 of the Indian Contract Act, 1872.
2. The pledger and pledgee undertake to abide by the provisions of the Indian Contract Act, 1872, the Depositories Act, SEBI Regulations, circulars, and bye-laws in force from time to time, as may be applicable.
3. Pledge requests can generally be placed between 8:00 AM and 7:00 PM on trading days via depository authorisation (CDSL/NSDL OTP).
4. Pledge requests made after 7:00 PM will be accepted by 12:00 PM on the next working day.
5. The pledgor remains the beneficial owner and continues to receive corporate benefits, such as dividends, during the pledge period.

6. The collateral amount is calculated based on the previous closing price of your securities after applying the applicable haircut cap.
7. If you submit an unpledge request before 3:30 PM, your stocks will be available in your demat account for trading on the following day. For requests placed after 3:30 PM, your stocks will be available in your demat account for trading the day after.
8. There is no cutoff time applicable in the unpledging facility.
9. Pledged securities utilised towards a Margin Short Sell position cannot be unpledged until the client maintains the required minimum margin and fulfils the applicable margin requirements.

2.5. Disclosure statement of pledge and unpledge in case of branch/broker/UID login:

1. **Pledge disclosure statement:**

- Margin pledge is a facility whereby eligible securities held in the client's demat account are pledged in favour of the broker/clearing member to obtain collateral margin for trading purposes.
- Ownership of the pledged securities remains with the client; however, a pledge lien is created in favour of the broker/clearing member until the pledge is released.
- The margin value of pledged securities is determined after applying applicable haircuts prescribed by Exchange policy.
- Only securities approved by the Exchanges and Clearing Corporations shall be eligible for margin pledge benefits.

2. **Unpledge disclosure statement:**

- An unpledge request may be initiated by the client for the release of pledged securities from the collateral mechanism, subject to applicable regulatory requirements and policies.
- Unpledging of securities shall be permitted only if sufficient margins remain available after the release of the requested securities.
- The broker may reject or partially process an unpledge request if it results in a margin shortfall or if any trading, settlement, or other obligations remain outstanding.

- Upon successful unpledge, the lien marked on the securities in favour of the broker/clearing member shall be removed through the depository system.
- The broker reserves the right to withhold, defer, or reject an unpledge request in the event of outstanding dues, margin deficiencies, regulatory restrictions, or risk management concerns.

2.2. Logs management:

- Each and every entry should be logged in the backend for future verification and for audit-related purposes.
- The logs must include;
    1. Client code
    2. Client name
    3. Transaction type (pledge, unpledge, verify market, transfer market)
    4. Transaction request date & time
    5. Transaction done by (client, broker, branch, UID)
    6. Transaction done code (client - client code, branch - branch code, broker - broker code, UID - UID code)
    7. Transaction script
    8. Transaction Quantity
    9. Valuation
    10. Status
    11. Entry source (JPLUS / JLITE)
    12. Entry source type (WEB/APP - android/ios)

2.3. Request synchronisation:

- Each and every entry done by respected platform, respected user should be synchronized over all the platforms.
    1. If an entry is done within the JLITE, the entry should be reflected in UIDs login and their mapped broker/branch login
    2. If a broker punches the entry from the JPLUS web/APP, the respective entry must be reflected in both platforms; vice versa within client login (JPLUS web - JLITE web)

Error handling:

1. If the client does not exist, is closed, or is inactive - Please enter a valid client code.
    a. In this case, check branch hierarchy is followed properly; only clients mapped to a particular branch are able to perform for EDIS.
2. **Selected quantity field:**
    a. If the user enters 0, then show Quantity must be greater than 0.
    b. If the user enters a quantity above the actual available quantity, then show " Quantity must be less than or equal to available quantity
3. **Terms and conditions & authorisation:**
    a. If the user only accepts one term and condition and does not select another one, then show " Please accept terms and conditions to proceed further".
4. **Transfer stocks validation:**
    a. IF the same demat ID (initiator demat ID) is entered by the user, then give an error that the target Demat ID must be unique

Logics and acceptance criteria:

1. Verify Stocks:

Acceptance Criteria:

1. Clients must enter scripts to select quantities in the next step. When the user selects a script, the maximum quantity should be based on the available quantity.
2. Search should be performed only by stock name.
3. The available quantity logic is applicable only if the client performs the same process on the same day.
4. The maximum total should be calculated based on the quantity selected for the scripts.
5. If the user creates a new TPIN, redirect the user to the dashboard page from the Verify page.
6. If the user closes the popup (Success, Failed, or Cancelled), the dashboard page should be displayed.

7. The request date format should be **DD-Month-YYYY HH:MM**.
8. Time should be displayed in the 24-hour format.
9. The Request ID should be alphanumeric and should start with **JBL2116411518**.
10. The Enquiry API must be called every 5 minutes after the request is submitted so that the latest status is displayed accurately.
11. If the available quantity is 0, the corresponding scripts should be disabled.
12. Scrolling should follow the current JPLUS design system standards.
13. The valuation of the maximum total should be displayed only in numeric format. CR and LAKH formats should not be used.
14. The valuation should be displayed with only two decimal places

2. Transfer Stocks:

Acceptance Criteria

1. Clients must enter scripts to select quantities in the next step. When the user selects a script, the maximum quantity should be based on the available quantity.
2. Search should be performed only by stock name.
3. If the stock selection value exceeds ₹2,00,000, an error message should be displayed.
4. The available quantity logic is applicable only if the user performs the process on the same day.
5. The authorization page should follow the hierarchy from Demat ID to Reason. If the hierarchy is not followed, the Continue button should remain disabled.
6. Client Master should be accepted only in PDF format.
7. The maximum total should be calculated based on the quantity selected for the scripts.
8. If the user creates a new TPIN, redirect the user to the dashboard page from the Verify page.
9. If the user closes the popup (Success, Failed, or Cancelled), the dashboard page should be displayed.
10. Time should be displayed in the 24-hour format.
11. The Request ID should be alphanumeric and should start with **JBL2116411518**.

12. The Enquiry API must be called every 5 minutes after the request is submitted so that the latest status is displayed accurately.
13. If the available quantity is 0, the corresponding scripts should be disabled.
14. IPV Now/Later should follow the current logic implemented in COMET.
15. Scrolling should follow the current JPLUS design system standards.
16. The valuation of the maximum total should be displayed only in numeric format. CR and LAKH formats should not be used.
17. The valuation should be displayed with only two decimal places.

3. Pledge:

Acceptance Criteria

1. The Margin Disclosure popup should open every time the user clicks on Pledge/Unpledge.
2. No action should be allowed outside the Margin Disclosure popup. The user must proceed with the margin pledge process.
3. The Select Stock button on the dashboard should be enabled only when at least one script is selected. If no scripts are selected, it should remain disabled.
4. Search should be performed only by stock name.
5. Valuation and post-haircut valuation should be updated based on the quantity selected.
6. If any Terms and Conditions are not fulfilled, the corresponding error message should be displayed.
7. No actions should be allowed outside the Terms and Conditions popup. The user must close the popup first.
8. The maximum total should be calculated based on the quantity selected for the scripts.
9. If the user creates a new TPIN, redirect the user to the dashboard page from the Verify page.

10. If the user closes the popup (Success, Failed, or Cancelled), the dashboard page should be displayed.
11. Time should be displayed in the 24-hour format.
12. The Request ID should be alphanumeric and should start with **JBL2116411518**.
13. The Enquiry API must be called every 5 minutes after the request is submitted so that the latest status is displayed accurately.
14. Scrolling should follow the current JPLUS design system standards.
15. The valuation of the maximum total should be displayed only in numeric format. CR and LAKH formats should not be used.
16. The valuation should be displayed with only two decimal places.
17. For brokers, client consent must be obtained on the Quantity Authorization page before sending the pledge request. The OTP format should be exactly 4 digits.

4. Unpledge:

Acceptance Criteria:

1. The Unpledge Disclosure popup should open every time the user clicks on Pledge/Unpledge.
2. No action should be allowed outside the Unpledge Disclosure popup. The user must proceed with the unpledge process.
3. The Select Stock button on the dashboard should be enabled only when at least one script is selected. If no scripts are selected, it should remain disabled.
4. Search should be performed only by stock name.
5. If any Terms and Conditions are not fulfilled, the corresponding error message should be displayed.
6. No actions should be allowed outside the Terms and Conditions popup. The user must close the popup first.
7. Valuation should be updated based on the quantity selected.
8. Valuation should be displayed only in numeric format. CR and LAKH formats should not be used. Only two decimal places are allowed.
9. The maximum total should be calculated based on the quantity selected for the scripts.

10. If the user closes the popup (Success, Failed, or Cancelled), the dashboard page should be displayed.
11. For brokers, an OTP must be entered before sending the unpledge request.
12. The OTP should be exactly 4 digits in length.
13. If the user closes the popup (Success, Failed, or Cancelled), the dashboard page should be displayed.
14. Time should be displayed in the 24-hour format.
15. The Request ID should be alphanumeric and should start with **JBL2116411518**.
16. The Enquiry API must be called every 5 minutes after the request is submitted so that the latest status is displayed accurately.
17. Scrolling should follow the current JPLUS design system standards.

CTA (Button/s)	**View Status**	**View Status**	**View Status**

3. Stakeholders:

3.1. Stakeholders' Details:

- The essential stakeholders involved in this project include the Jainam Broking Ltd team, including Brijal Pachchigar, Nemil Shah and the tech team.

4. Project conclusion:

- This enhancement will enable Authorised Persons (Branches) to seamlessly initiate Normal Pledge requests through the JPLUS application by leveraging clients' available free demat holdings. The solution will integrate with CDSL APIs for pledge creation and processing, ensuring a secure and compliant pledge workflow. Users will be able to view pledge-eligible holdings, select full or partial quantities based on available free balances, and obtain real-time valuation of pledged securities. Robust validations will prevent excess quantity pledging, while Two-Factor Authentication (2FA) through OTP verification on registered mobile numbers and email addresses will provide an additional layer of security. Overall, the implementation will streamline the pledge creation process, improve

operational efficiency, reduce manual intervention, and ensure a secure and user-friendly experience for branches and clients.
